DRAWING

Draw

The ink pen. Draw freehand, or trace over a reference image.

Eraser

Erases parts of your drawing.

Eraser size

Sets a fixed eraser size — doesn't vary with pressure or speed, for predictable erasing.

Wobble

Adds a natural hand-tremor effect. Set to 0 for perfectly sharp lines.

Thickness

Scales your whole pen size up or down at once.

Min / Max

The thinnest and thickest your line can get, based on pressure or speed.

REFERENCE AND TRACING

Reference

Upload one of your own images to trace over.

Eye icon

Shows or hides the reference image without deleting it.

Remove

Deletes the reference photo completely.

Fade

How visible the reference image is while you trace.

Reference size

Resizes just the reference photo — separate from zooming your whole canvas.

CANVAS, SAVING AND EXPORT

Paper color

Changes the background you see while drawing. Never affects your exported artwork.

Undo / Redo

Also work with a two-finger tap (undo) or three-finger tap (redo), anywhere on the canvas.

Clear

Wipes the canvas completely. Cannot be undone.

Zoom +/- and Reset View

Zoom with buttons or pinch, and reset back to normal any time.

Save / My Drawings

Stores drawings on this device only, not in the cloud.

Export

PNG keeps transparency, for digital use. JPEG and Print/PDF add a solid background, for printing.
